

# Customer Journey

This is very use full to the upcoming agricultural field developer and the researcher to work on predictive analysis and do their job more effectively.

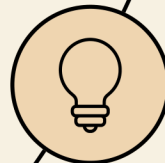

Customer buy more products because the rate will be decreases.

It will be used to detect the growth of the agriculture in the country..  
[used to analyse the annual growth]

Reducing waste and improving profits.

Data analytics can help farmers monitor the health of crops in real-time, create predictive analytics related to future yields and help farmers make resource management decisions based on proven trends.
